

El Dr. **Thorsten Faust**, pediatra y director del Bio-Neurofeedback Institute, tiene el placer de invitarles a la conferencia que tendrá lugar el próximo **jueves 9 de junio** a las **19.00 horas** en la **Sala de Conferencias del Instituto Oncológico Teknon**:

## **Neurofeedback: A new way of treatment for ADHD without psychostimulant medication**

A cargo de:

**Dra. Kerstin Mayer**

*Psychologist, expert in Cognitive Neuroscience. Head of Education-neuroCare Group (Alemania)*

“In this talk we want to present an option of effective non-pharmacological treatment for ADHD and other psychiatric disorders called neurofeedback. The focus will be on neurofeedback of slow cortical potentials (SCP) and ADHD. The rationale of neurofeedback is based on the under arousal and self-regulation difficulties in ADHD. SCP-neurofeedback teaches self-regulation through the feedback and reward of brain activity. Many studies have shown that neurofeedback improves the ADHD symptoms of children as well as adults. Methods and results will be summarized and other possible applications will be presented. The talk is open for all occupations and interested people.”

Al finalizar la exposición teórica, la Dra. Mayer ofrecerá una demostración práctica de la técnica SCP.
